

SERVICE

In-house vs Managed DLP: Which is right for me?

Both in-house and managed DLP teams have their own advantages and challenges. When trying to choose between either service delivery method, consider organizational needs, resources, and priorities. Remember that the effectiveness of DLP depends on a combination of technology, processes, and people, regardless of the management approach chosen.

**In-house
Ideal**

**In-house
Reality**

Managed

Time to Value

Fast implementation due to dedicated, highly trained resources

Slowest implementation due to resource constraints & competing priorities

Fastest implementation with pre-built frameworks & experienced, highly trained resources

Expertise

In-depth knowledge of DLP & organizational systems/policies

Limited DLP knowledge & lack of experienced resources leading to gaps in DLP effectiveness

Specialized skills, knowledge & experience in DLP

Customization

Targeted configurations based on company requirements & processes

Limited configurations due to gaps in DLP knowledge, resource & time constraints

Tailored solutions based on direct experience implementing best practices & industry standards

Costs

Significant up-front investment costs; long-term cost savings

High initial & ongoing soft costs (training, ineffectiveness & turnover)

Predictable, budgeted costs throughout program lifecycle

Control

Effective control over DLP program

Ineffective control over configurations, operations & future state; confused decision-making

Comprehensive control through pre-negotiated SLAs, program outcomes & regular reporting; streamlined decision-making

Scalability

Able to scale resources & skills as needed; minimal additional costs

Unable to scale any aspect of DLP program without long lead times & additional costs

Dynamic scaling across resources, processes & tooling on demand; no additional costs
