

Data Recovery & Resilience

Datasheet

What is Data Recovery & Resilience?

Data recovery and data resilience are two important concepts that are often used interchangeably. However, there is a subtle difference between the two.

Data recovery is the process of restoring data that has been lost or damaged. This can be done through a variety of methods, such as restoring from a backup, using a data recovery tool, or manually restoring files. Data recovery is essential for businesses of all sizes. Even a small data loss event can have a significant impact on a business. There are a variety of data recovery methods available, and the best method for a particular business will depend on the type of data that was lost and the level of urgency required to recover the data.

Data resilience is the ability of a system to withstand and recover from a data loss event. This includes having a backup plan in place, using data protection technologies, and having a disaster recovery plan.

What is Infolock's Data Recovery & Resilience solution?

Infolock delivers "planning plus the platform" that organizations of all sizes rely on to safeguard their sensitive data assets. Business disruption from data loss or data compromise can have a devastating impact; Infolock's robust Data Recovery and Resilience solution engages both a strategic program development component, as well as a direct, technical platform component, to ensure an organization can proactively limit operational impacts from a data loss incident.

Infolock works closely with customers to deeply understand their business needs, identify their critical data assets, map their existing infrastructure and tools, and increase their core operational resilience over time.

Resilience requires more than just the involvement of the security team, however; Infolock works with a customer's IT department, legal staff, and business unit leaders to assess their challenges, deploy the necessary technologies and processes, and train their team members to use them.

Infolock will also work with an organization to maintain their data recovery and resilience program. Infolock consultants conduct regular assessments to ensure that their program is still meeting their needs, while also making recommendations for any changes that need to be made.

What does the Data Recovery & Resilience solution entail?

Infolock's Data Recovery and Resilience solution is delivered in the following phases, building on one another:

- 1 Assess customer's current data recovery and resilience capabilities
- 2 Identify technical and operational gaps in their current posture
- 3 Understand customer's maturity level, and what opportunities exist for improvement
- 4 Develop a prioritized plan to improve recovery, resilience, and reporting
- 5 Implement cost-effective technical tools, integrate those tools with their environment, and configure them for maximum coverage and effectiveness
- 6 Deliver an operational plan for ongoing management and maintenance

What are the benefits of Infolock's Data Recovery & Resilience solution?

Research shows that every \$100 spent on data risk management program development and operations returns 6-9x value to the implementing organization, in reduced remediation costs, improved recovery times, streamlined crisis and incident response efforts, better executive and compliance reporting, and significantly lower vendor licensing and usage costs. The advantages of Infolock's outcome-oriented approach (Assess, Develop, Implement, Train, Maintain) for a data risk-driven recovery and resilience program are clear:

Customers get the benefits of Infolock's 18 years of expertise and experience in data recovery and resilience

Infolock provides ongoing support to ensure customers remain effective and up-to-date over time

Infolock works with customers to understand their specific needs and develop a sustainable plan

Infolock delivers tangible results in clear language that senior executives, board members, and other governance and management stakeholders can understand and base decisions on

Infolock helps customers implement the plan and trains their team on how to operate it

About Infolock

Founded in 2005, Infolock is the go-to data risk management advisory, consulting, and managed services firm for security conscious organizations. With a programmatic approach, Infolock expertly manages the complex data risks of its clients, enabling organizations to achieve their strategic business objectives. Named among the "Fastest Growing Companies" on Inc. Magazine's "Inc. 5000" list, Infolock developed DataRAMP™, a data risk management framework which empowers organizations to understand and manage data risk in the same manner as other organizational risks, such as financial, competitive, and regulatory risk. Headquartered in Arlington, VA, Infolock serves customers in the financial services, healthcare, government, educational and other highly-regulated industries around the world.
